

School...

School Is the Key to Your Future

1. What you learn in school becomes essential to living as an adult
2. Going to school regularly is important to learning- it's hard to play catch-up
3. If you are not doing well in school it may be that the work is more challenging than it should be or you may have a learning disorder- ask your teacher for help
4. Become a part of the planning team for your education-it's your mind
5. Make sure you know your educational plans and have set goals
6. Ask your teachers to teach you the skills you think you will need
7. Your school should accommodate you with the things you need for therapy or healthcare procedures
8. If you need help-ask for it...
